

SDLC Overview - Course Example Project

Following example is used in each phase:

Build a software application for an imaginary bank called **SFBank**.

Functional Requirement:

SFBank Website to have landing page to enter Username and password with two buttons - submit and cancel buttons.

When the user enters username and password and hits submit button. Software validates the user credentials and respond back with the user account balance details.

Non functional requirements:

- maximum 10 users are allowed
- After user enters username and password and hits the submit button - the software should respond back with in 10 seconds.
